

Water Chemistry of the Redwood Creek and Mill Creek Basins, Redwood National Park, Humboldt and del Norte Counties, California (Classic Reprint) (Paperback)

Filesize: 6.49 MB

Reviews

This type of publication is almost everything and helped me looking forward and much more. I am quite late in start reading this one, but better then never. You wont really feel monotony at whenever you want of your own time (that's what catalogs are for relating to if you ask me).

(Prof. Buddy Leuschke)

WATER CHEMISTRY OF THE REDWOOD CREEK AND MILL CREEK BASINS, REDWOOD NATIONAL PARK, HUMBOLDT AND DEL NORTE COUNTIES, CALIFORNIA (CLASSIC REPRINT) (PAPERBACK)

To get **Water Chemistry of the Redwood Creek and Mill Creek Basins, Redwood National Park, Humboldt and del Norte Counties, California (Classic Reprint) (Paperback)** eBook, make sure you access the hyperlink below and download the ebook or gain access to additional information which might be relevant to WATER CHEMISTRY OF THE REDWOOD CREEK AND MILL CREEK BASINS, REDWOOD NATIONAL PARK, HUMBOLDT AND DEL NORTE COUNTIES, CALIFORNIA (CLASSIC REPRINT) (PAPERBACK) book.

Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from Water Chemistry of the Redwood Creek and Mill Creek Basins, Redwood National Park, Humboldt and Del Norte Counties, California Studies during storms indicated that specific conductance and alkalinity were two to three times as likely to decrease at the discharge peak in logged watersheds as in forested ones. This suggests that overland flow containing lower concentrations of soil-derived dissolved solids than flow from other sources is a larger component of peak flow in logged watersheds than in forested watersheds. Comparing a storm in November 1974 to one in February 1975, nitrate concentration increased significantly from November to February in a stream draining a logged watershed and decreased significantly in a stream draining a forested watershed. Then from the rainy season to the dry season, nitrate decreased in both logged and forested watersheds. This pattern suggests that soil nitrate produced by fixation and organic decomposition early in the rainy season tends to wash out of logged watersheds but be taken up in tree growth in forested watersheds. As the dry season progresses, base flow containing little nitrate enters the streams, causing a decrease in nitrate concentration. By contrast, the other plant nutrients-phosphorus, Kjeldahl nitrogen, ammonium, and dissolved organic carbon-all decreased in streams from the November 1974 storm to the February 1975 storm and changed little from the rainy season through the dry season. This pattern suggests that these materials tend to accumulate in the soil during the dry season and be washed out and diluted as the rainy season progresses. Very little reaches the water table due to soil absorption so that little appears in the base flow during the dry season. About the Publisher Forgotten Books publishes hundreds of thousands...
