MENSURATION. It is frequently required to find the length of a curve, the area of a plane, the surface or volume of a solid, or the contents of a vessel. If the equations to the curve, the bounding line, or surface be given, it is in general necessary to consider the line, surface, or volume to be cut up into a number of infinitesimal elements, and then to find the sum of all these elements by integration between the limits imposed by the question. If the lines are, or can be, broken up into straight lines, or certain well-known curves, and the surfaces are plane or formed by the revolution of well-known curves, the lengths, areas, and volumes can generally be found by the simple formulæ given in treatises...
