However, increasing the observation frequency while keeping the time span of the observation fixed does not always help in estimating parameters. A different type of consistency, the consistency of an estimator as the observation frequency goes to infinity, becomes important in studying high frequency data. In addition to the consistency, the deviation of a financial time series from a continuous process is also increasingly significant as the observation frequency increases. This deviation is not negligible and causes another difficulty in estimating parameters. This paper concentrates on constructing estimators of variance parameter using contaminated observations; i.e., observations from a continuous process with deviation at time of observation. The consistencies of these estimators, as the observation frequency goes to infinity, are analyzed. Key Words: f-consistency; observation noise; quadratic estimator.
