GAIN AND LOSS OF MOISTURE IN LARGE FOREST FUELS (CLASSIC REPRINT) (PAPERBACK)

To read **Gain and Loss of Moisture in Large Forest Fuels (Classic Reprint) (Paperback)** PDF, you should click the link under and download the ebook or get access to other information which might be have conjunction with GAIN AND LOSS OF MOISTURE IN LARGE FOREST FUELS (CLASSIC REPRINT) (PAPERBACK) ebook.

Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from Gain and Loss of Moisture in Large Forest Fuels Log moisture content did not provide a usable index of seasonal, monthly, or current fire danger severity. There are two main reasons for the failure (1) fire danger, as now measured, is based upon the moisture content of fine fuels, which respond to weather much more rapidly than logs, and (2) two logs of approximately the same size had such different moisture contents at one time and from one time to another that the results from one were not comparable with the results from the other. Log moisture was found to decrease continuously, almost without regard to midsummer rain, from the last decade of June, which received approximately inch of rain, to the first decade after August 15 that received a similar amount. Rain falling between June 25 and August 15 had practically-no lasting effect upon log moisture content. Fire danger, in fuel types which include much pole and log-sized fuel, can be expected to increase greatly between July 10 and August 15 because of constant moisture losses. The present system of fire danger measurement makes no allowance for any intensification of the cumulative factor of danger during this period. The evidence indicates that the two main factors which determine how dry a log will become are its moisture content at the beginning of the summer desiccation period, and the length of the desiccation period. The log moisture at the beginning of the period will depend to a large extent on the amount of spring rain. It is therefore believed that a good index of the inflammability of large fuels during late season can be worked out on the basis of the amount...
