Parkhurst, for Extension of His Patent for Ginning Cotton, and Burring Wool The machinery for taking the burrs and other foreign substances from wool, called burring machinery, is designed and adapted to be used both separately and in combination with a common carding machine. When used in combination with a carding machine, as it generally is, the burr cylinder is placed next the feed rollers, and, revolving with greater surface velocity than the feed rollers, draws the unburred wool from between them on to plain surfaces, between narrow, toothed, or serrated steel rings, placed upon a light, hollow, rigid, metallic cylinder, called a burr cylinder; the plain surfaces, being somewhat less in diameter than the serrated rings, allow the material to be drawn below the periphery of the steel rings on to the plain surfaces, and leave the burrs on top to be knocked off by a revolving guard over the burr cylinder into a trash receptacle in front. The wool, being thus freed from burrs, is stripped from the burr...
