

Impact of physicochemical soil characteristics of on cotton yield

Filesize: 6.63 MB

Reviews

This is the finest publication we have read through right up until now. Better then never, though i am quite late in start reading this one. Its been written in an remarkably easy way in fact it is only after i finished reading through this book by which basically altered me, affect the way i think.

(Dr. Gabriella Hayes)

LAP Lambert Acad. Publ. Jan 2011, 2011. Taschenbuch. Book Condition: Neu. 220x150x5 mm. This item is printed on demand - Print on Demand Neuware - Inter-correlation statistical studies among soil properties can result in establishing relationships between soil properties and crop yield. The objective of this study was to compare statistical methods of examining relationships between cotton (*Gossypium hirsutum* L.) yield, quality and soil properties. Soil and plant samples were collected from 1-ha grids from various regions of Rajkot region in Gujarat, India. Statistical results are presented from correlation and regression analyses between cotton yield and the properties of pH, electrical conductivity, % moisture, % porosity, % gravel content, salinity, gravimetric water content, bulk density and percentage clay. Correlation coefficients of -0.79, -0.70, -0.68, 0.62, -0.73, 0.35, -0.64, -0.69 and -0.70 respectively, were determined. A site-specific response model of cotton yield was developed based on ordinary least squares regression analysis. The response model indicated that salinity, percentage clay, electrical conductivity, pH, gravel content, percentage porosity were the most significant soil properties influencing cotton yield at the study site. 88 pp. Englisch.
