### ***Reviews***

*Here is the finest publication we have read right up until now. It is actually written in easy words instead of difficult to understand. It has been written in a remarkably easy way in fact it is only right after I finished reading this book in which basically changed me, modified the way I really believe.*

Starlane Publications. Paperback. Book Condition: new. BRAND NEW, Subquantum Kinetics: A Systems Approach to Physics & Cosmology (3rd Revised edition), Paul A. LaViolette, Subquantum kinetics is a revolutionary physics methodology that was inspired by advances in our understanding of how non-equilibrium reaction systems spawn self-organising wave patterns. Replacing the fragmented and self-contradictory framework of modern physics, sub-quantum kinetics opens the door to a truly elegant unified field theory. Electromagnetic, gravitational, and nuclear potential fields all emerge from a single set of non-linear equations representing subquantum processes postulated to take place throughout all space. It is the first fundamental theory to have its predictions of the nucleon's energy potential profile later confirmed by particle scattering form factor data. This approach, which is consistent with the ideas of Whitehead, Einstein, de Broglie, and Feynman, provides answers to many fundamental questions: Namely, how does the subquantum matrix generate the zero-point energy continuum and spawn the formation of matter? How do charge and mass come into being and how do they generate fields consistent with the laws of electrostatics and gravitation? Subquantum kinetics also lays the foundations for a new wave theory of matter. Its non-dispersing, periodic structures resolve the wave-particle dualism and produce de Broglie wave diffraction effects consistent with observation. Subquantum kinetics also leads to a new view of our cosmos: an open, order-generating universe, continuously creating matter and energy. Its prediction of a new form of energy, continuously emerging within all planets and stars, led to the discovery that planets, brown dwarfs, and red dwarf stars all share a common mass-luminosity relation and it also anticipated the anomalous blueshift found in the Pioneer 10 maser signal. This book addresses many other subjects such as: Is the universe really expanding? What produces the cosmological redshift? Do black holes really exist? What makes...
