Excerpt from Cotton Wash-Wear Research at the Southern Utilization Research and Development Division, New Orleans, Louisiana: March 1961 One serious problem threatening the acceptability of some fabrics with wash-wear finishes was their tendency to pick up soil during laundering. Research at the Southern Division showed that certain acrylic and sili cone polymers used in finishing softened in the presence of heat, and. Picked up soil which could not be removed afterward. Since then industry has generally adopted polyethylene instead, as recommended by Southern Division scientists and covered by a usda patent.
