Condition: New. Publisher/Verlag: VDM Verlag Dr. Müller | Theory and Practice | This research monograph is an excellent resource forgraduate students and senior researchers in the areaof Computational Fluid Dynamics. It develops anumerical method for computer simulations ofmulti-component flows involving capillary freesurfaces, and provides detailed algorithmimplementation notes in two and three dimensions. Themonographalso contains a comprehensive review of relevantsolution methods for the incompressible Navier-Stokesequations and techniques for managing moving boundaries.Chapter one introduces a new projection methodfor the incompressible Navier-Stokes equations. Thenormally coupled velocity and pressure are split andsolved for in two separate steps using a low-orderFinite Element. The proposed method guarantees exactlocal mass conservation at a reduced computationalcost. Chapter two presents an innovative technique totrack free-moving interfaces. The technique modifiesthe computational grid in the vicinity of eachinterface to avoid computational cells intersected bythe interface while preserving the connectivity ofthe mesh. | Format: Paperback | Language/Sprache: english | 88 pp.
