

## Cytokine Bioassays: Methods and Protocols (Hardback)

Filesize: 5.08 MB

### **Reviews**

*The very best ebook i ever study. It really is rally fascinating throug reading through period of time. It is extremely difficult to leave it before concluding, once you begin to read the book.*

**(Coleman Kreiger)**

## CYTOKINE BIOASSAYS: METHODS AND PROTOCOLS (HARDBACK)

To download **Cytokine Bioassays: Methods and Protocols (Hardback)** eBook, please access the button under and save the file or have accessibility to additional information which are in conjunction with CYTOKINE BIOASSAYS: METHODS AND PROTOCOLS (HARDBACK) book.

Humana Press Inc., United States, 2014. Hardback. Condition: New. 2014 ed.. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*. Cytokines are pleiotropic regulatory proteins involved in essentially all biological processes and associated with a wide variety of diseases, including inflammatory disorders as well as many types of cancer and leukemia. Knowledge about the quantitative and qualitative nature of cytokine production is critical in the understanding of normal and pathological processes. The cytokine detection in biological and clinical samples faces many challenges including their low abundance, the need to distinguish between active and latent cytokine forms, and the need to measure multiple cytokines in a single assay. This volume will provide a comprehensive collection of classic and cutting-edge methodologies that are currently used to analyze and quantify cytokines and their biological activities in complex biological and clinical samples. The chapters are divided into four main categories. The first group focuses on the immunodetection of released cytokines in tissue culture supernatants, plasma, serum and whole blood samples by immunoassays. These immunoassays measure the total concentrations of released cytokines regardless of their biological activity and include ELISA, flow cytometry, ELISPOT and the antibody-based proximity ligation. The second group will focus on the analysis of biologically active cytokines by bioassays using neutralizing antibodies, chemotaxis assay, cytokine-induced cell degranulation assay, cell proliferation and differentiation, cytokine-induced cytokine production and the radioreceptor cytokine assay. The third group focuses on the analysis of intracellular cytokines by flow cytometry, western blotting and fluorescence and confocal microscopy. In addition, this category includes protocols for quantitative analysis of cytokine gene expression by real time RT-PCR and analysis of the cytokine promoter occupancy by chromatin immunoprecipitation. The fourth group focuses on the recently developed multiplex arrays that can measure multiple cytokines in the same sample at the same time....
