In these and similar movements I was able to detect distinctly the vaulting action of the spider, and the eye, being thus familiarized with the movement, was less liable to be deceived in the more difficult observation of the quick spring at the time of the aerial flight. The posts and parts of railings adjoining were covered with threads adhering to the wood and streaming out into the air. These were the result in part of the feints at flight just referred to, but were , partly owing to another cause. The spiders, previous to flight or vaulting, attached themselves to the post in the manner common to most of their...
